TOXICOLOGY

VOLUME CONTENTS

Volume 81 (1993)

Exposure to 2,3,7,8-tetrachlorodibenzo-*para*-dioxin leads to defective dentin formation and pulpal perforation in rat incisor tooth (**A single dose of 1 mg to young TCDD "resistant" rats impairs growth of skull bones and teeth, possibly suggestive of induced vitamin A deficiency**)
by S. Alaluusua, P.-L. Lukinmaa, R. Pohjanvirta, M. Unkila and J. Tuomisto (Helsinki and Kuopio, Finland) 1–13

Caveats regarding the use of the laboratory rat as a model for acute toxicological studies: modulation of the toxic response via physiological and behavioral mechanisms (**Rats respond to acute toxicity by lowering core temperature via physiological and behavioral mechanisms whereas man does not**)
by W.P. Watkinson and C.J. Gordon (Research Triangle Park, NC)..... 15–31

Developmental patterns of aluminum in mouse brain and effects of dietary aluminum excess on manganese deficiency (**Dietary Al can interact with Mn metabolism during development and also may exacerbate a marginal Mn deficiency**)
by M.S. Golub, B. Han, C.L. Keen and M.E. Gershwin (Davis, CA)..... 33–47

meso-2,3-Dimercaptosuccinic acid monoalkyl esters: effects on mercury levels in mice (**The monoesters were generally more potent on an equimolar basis than was meso-2,3,-Dimercaptosuccinic acid**)
by G.R. Gale, A.B. Smith, M.M. Jones and P.K. Singh (Charleston, SC and Nashville, TN)..... 49–56

Effect of different renal glutathione levels on renal mercury disposition and excretion in the rat (**Diminished kidney non-protein sulfhydryl levels enhance renal mercury toxicity, whereas increased ones mitigate the effects of the metal**)
by G. Girardi and M.M. Elías (Rosario, Argentina)..... 57–67

Mutagenicity of chrysene, its methyl and benzo derivatives, and their interactions with cytochromes *P*-450 and the Ah-receptor; relevance to their carcinogenic potency (**Enzyme induction and receptor interaction have no relevance to carcinogenicity**)
by Y-L. Cheung, T.J.B. Gray and C. Ioannides (Guildford and Alnwick, UK)..... 69–86

Book Reviews 87–88

Relationship between the critical level of oxidative stresses and the glutathione peroxidase activity (**In cultured cells there seems to be an inverse relationship between susceptibility to tert-butylhydroperoxide and the enzyme activity**)
by O. Toussaint, A. Houbion and J. Remacle (Namur, Belgium)..... 89–101

Evaluation of the contribution of chronic skin irritation and selected compositional parameters to the tumorigenicity of petroleum middle distillates in mouse skin (**Chronic skin irritation may be a necessary but not sufficient condition for tumor development**)
by J.J. Freeman, T.M. Federici and R.H. McKee (East Millstone, NJ) 103–112

Olfactory cytochrome *P*-450 immunoreactivity in mice is altered by dichlobenil but preserved by metyrapone (**It is concluded that dichlobenil-induced olfactory toxicity is cytochrome *P*-450 mediated**)
by E. Walters, K. Buchheit and J.A. Maruniak (Columbia, MO) 113–122

Joint action of benzoic hydrazide and β-aminopropionitrile on *Xenopus* embryo development (**Evidence is presented to suggest that the two compounds act in a similar manner**)
by D.A. Dawson (Knoxville, TN) 123–130

Direct effects of 2,3,7,8-tetrachlorodibenzo-*p*-dioxin (TCDD) on human tonsillar lymphocytes (**Low density B-cells appear to be a sensitive cellular target to TCDD toxicity**)
by S.C. Wood, H. Gwang Jeong, D.L. Morris and M.P. Holsapple (Richmond, VA; Taejon, Korea and Boston, MA) 131–143

Induction and inhibition of cytochrome *P*-450-dependent monooxygenases in hamster tissues by ethanol **(Ingestion of ethanol for several days has differential effects on cytochromes *P*-450)**
by T.-H. Ueng, Y.-F. Ueng, J.-N. Tsai, I-C. Chao, T.-L. Chen, S.S. Park, M. Iwasaki and F.P. Guengerich (Taiwan, R.O.C.; Frederick, MD and Nashville, TN) 145–154

Cd^{2+}-induced c-*myc* mRNA accumulation in NRK-49F cells is blocked by the protein kinase inhibitor H7 but not by HA1004, indicating that protein kinase C is a mediator of the response **(Cd-induced oncogene expression appears to involve primarily an increase in cytosolic Ca)**
by N. Tang and M.D. Enger (Ames, IA) 155–164

No effect of dieldrin on progesterone production in gilts **(Feeding of pigs with dieldrin has no effect on progesterone production)**
R. Kotonya and N.-E. Jensen (Geneva, Switzerland) 165–171

Effect of chronic consumption of metabisulphite on the integrity of the rat kidney cellular system **(5 mg/kg daily for two weeks change several marker enzymes to indicate renal damage)**
M.A. Akanji, O.A. Olagoke and O.B. Oloyede (Ilorin, Nigeria) 173–179

Effects of linoleic and oleic acid anilides on prostacyclin synthesis and fibrinolytic profile of human endothelial cells in culture: relevance to the toxic oil syndrome **(Fatty acid anilides have distinctive effects on prostaglandin synthesis)**
C. de Castellarnau, I. Pich, C. Chanquia, L. Vila, C. Lagunas, J. Fontcuberta and M. Rutllant (Barcelona, Spain) 181–194

Evaluation of knit glove fabrics as barriers to dermal absorption of organophosphorus insecticides using an in vitro test system **(A comparison between different materials)**
V.B. Keeble, L. Correll and M. Ehrich (Blacksburg, VA) 195–203

Developmental toxicity of methanol in whole embryo culture: a comparative study with mouse and rat embryos **(Mouse embryos appear to have a greater intrinsic sensitivity to the developmental toxicity of inhaled methanol)**
J.E. Andrews, M. Ebron-McCoy, T.R. Logsdon, L.M. Mole, R.J. Kavlock and J.M. Rogers (Research Triangle Park, NC) 205–215

Repeated exposure to the polychlorinated biphenyl (Aroclor 1254) elevates the basal serum levels of corticosterone but does not affect the stress-induced rise **(Elevations in basal serum level of corticosteroids was not accompanied by changes in adrenal gland morphology)**
D.B. Miller, L.E. Gray, Jr., J.E. Andrews, R.W. Luebke and R.J. Smialowicz (NC, USA) 217–222

Contents of Journals Relating to Toxicology 223–231
